

3) Amendments to the Claims

Claims 1-89 (canceled)

90. (NEW) In an online commerce system including a buyer computer operated by a buyer, a seller computer operated by a seller, and a transaction facilitator, the transaction facilitator comprising a network-accessible transaction computer that facilitates commercial transactions between buyers and sellers and displays selected branding indicia in connection with a proposed transaction, a method for enabling a payment from a buyer to a seller utilizing a payment enabling system operated by a payment enabler, comprising the computer-implemented steps of:

b2
in response to a proposed transaction between the buyer and the seller facilitated by the transaction facilitator and redirection of the buyer computer to the payment enabling system, displaying information to the buyer computer for enabling the buyer to select a payment instrument, the information including and displaying identical selected branding indicia as the selected branding indicia of the transaction facilitator;

receiving transaction details information from the transaction facilitator;
creating an electronic invoice for the transaction utilizing the transaction details information;

displaying the electronic invoice to the buyer for approval;

in response to approval of the transaction from the buyer, displaying information to the buyer computer corresponding to a plurality of payment instruments for selection by the buyer for making payment to the seller;

receiving information from the buyer computer corresponding to a selected one of the plurality of payment instruments, indicative of the buyer's selection of a particular payment instrument for paying the seller;

completing the transaction between the buyer and the seller by utilizing the selected payment instrument to obtain funds from the buyer and transfer such funds to the seller.

91. (NEW) The method of claim 90, wherein the information displayed to the buyer computer further includes co-branding information comprising the branding indicia of the entity running payment enabler.

92. (NEW) The method of claim 90, wherein the information displayed to the buyer computer comprises a web page from an Internet web server.

93. (NEW) The method of claim 90, wherein the information displayed to the buyer computer comprises a registration page that enables the buyer to register with the payment enabler for the purpose of selecting a payment instrument.

*C-2
C-4*
94. (NEW) The method of claim 93, wherein the buyer registers a payment instrument prior to the transaction via a static registration process.

95. (NEW) The method of claim 93, wherein the buyer registers a payment instrument after the transaction via a dynamic registration process.

96. (NEW) The method of claim 90, wherein the transaction details information includes a transaction ID provided by the transaction facilitator.

97. (NEW) The method of claim 90, wherein the transaction details information includes price, shipping charges, handling charges, and total price.

98. (NEW) The method of claim 90, further comprising the step of communicating buyer user ID information from the transaction facilitator to the payment facilitator for use as a registration record ID.

99. (NEW) The method of claim 90, wherein the payment enabler is connected for communications with one or more payment instrument processors which carry out issuance of appropriate payment instruments in response to selection by the payment enabler.

O 2
Countd

100. (NEW) The method of claim 99, wherein the payment instrument processors are selected from the group comprising: a credit card transaction processor, a flash cash processor, a electronic funds transaction processor, a virtual private payment account processor, and a paper check processor.

101. (NEW) In an online commerce system including a buyer computer operated by a buyer, a seller computer operated by a seller, and a transaction facilitator, the transaction facilitator comprising a network-accessible transaction computer that facilitates commercial transactions between buyers and sellers and displays selected branding indicia in connection with a proposed transaction, a method for enabling a payment from a buyer to a seller utilizing a payment enabling system operated by a payment enabler, comprising the computer-implemented steps of:

in response to a proposed transaction between the buyer and the seller facilitated by the transaction facilitator and redirection of the seller computer to the payment enabling system, displaying information to the seller computer for enabling the seller to select a disbursement instrument, the information including and displaying identical selected branding indicia as the selected branding indicia of the transaction facilitator;

displaying information to the seller computer corresponding to a plurality of disbursement instruments selectable by the seller for receiving payment;

receiving information from the seller computer corresponding to a selected one of the plurality of disbursement instruments, indicative of the seller's selection of a particular disbursement instrument for receiving payment; and

completing the transaction between the buyer and the seller by obtaining funds from the buyer and transferring such funds to the seller utilizing the selected disbursement instrument.

102. (NEW) The method of claim 101, wherein the information displayed to the seller computer further includes co-branding information comprising the branding indicia of the entity running payment enabler.

103. (NEW) The method of claim 101, wherein the information displayed to the seller computer comprises a web page from an Internet web server.

104. (NEW) The method of claim 101, wherein the information displayed to the seller computer comprises a registration page that enables the seller to register with the payment enabler for the purpose of selecting a disbursement instrument.

105. (NEW) The method of claim 104, wherein the seller registers a disbursement instrument prior to the transaction via a static registration process.

106. (NEW) The method of claim 104, wherein the seller registers a disbursement instrument after the transaction via a dynamic registration process.

107. (NEW) The method of claim 101, further comprising the steps of, prior to the step of completing the transaction:

receiving transaction details information from the transaction facilitator; and
obtaining approval of the transaction from the buyer based upon the transaction details information.

108. (NEW) The method of claim 107, wherein the transaction details information includes a transaction ID provided by the transaction facilitator.

109. (NEW) The method of claim 107, wherein the transaction details information includes price, shipping charges, handling charges, and total price.

110. (NEW) The method of claim 101, further comprising the step of communicating seller user ID information from the transaction facilitator to the payment facilitator for use as a registration record ID.

111. (NEW) The method of claim 101, wherein the payment enabler is connected for communications with one or more payment instrument processors which carry out issuance of appropriate payment instruments in response to selection by the payment enabler.

*b2
cured*

112. (NEW) The method of claim 111, wherein the payment instrument processors are selected from the group comprising: a credit card transaction processor, a flash cash processor, a electronic funds transaction processor, a virtual private payment account processor, and a paper check processor.

113. (NEW) In an online commerce system including a buyer computer operated by a buyer, a seller computer operated by a seller, and a transaction facilitator, the transaction facilitator comprising a network-accessible transaction computer that facilitates commercial transactions between buyers and sellers and displays selected branding indicia to buyers and sellers in connection with a proposed transaction, a method for enabling a payment from a buyer to a seller utilizing a payment enabling system operated by a payment enabler, comprising the computer-implemented steps of:

b7d
CMT'd

in response to a proposed transaction between the buyer and the seller facilitated by the transaction facilitator and redirection of the seller computer to the payment enabling system, displaying information to the seller computer for enabling the seller to select a disbursement instrument, the information including and displaying identical selected branding indicia as the selected branding indicia of the transaction facilitator;

in response to the proposed transaction between the buyer and the seller facilitated by the transaction facilitator and redirection of the buyer computer to the payment enabling system, displaying information to the buyer computer for enabling the buyer to select a payment instrument, the information including and displaying identical selected branding indicia as the selected branding indicia of the transaction facilitator;

receiving transaction details information from the transaction facilitator;

generating an electronic invoice for the transaction utilizing the transaction details information;

displaying the electronic invoice to the buyer for approval;

in response to approval of the transaction from the buyer, displaying information to the buyer computer corresponding to a plurality of payment instruments for selection by the buyer for making payment to the seller;

receiving information from the buyer computer corresponding to a selected one of the plurality of payment instruments, indicative of the buyer's selection of a particular payment instrument for paying the seller;

displaying information to the seller computer corresponding to a plurality of disbursement instruments selectable by the seller for receiving payment;

receiving information from the seller computer corresponding to a selected one of the plurality of disbursement instruments, indicative of the seller's selection of a particular disbursement instrument for receiving payment; and

completing the transaction between the buyer and the seller by utilizing the selected payment instrument to obtain funds from the buyer and transfer such funds to the seller utilizing the selected disbursement instrument.

114. (NEW) The method of claim 113, wherein the information displayed to the buyer computer and/or to the seller computer further includes co-branding information comprising the branding indicia of an entity running the payment enabler.

*O'Neil
Entd*

115. (NEW) The method of claim 113, wherein the information displayed to the buyer computer comprises a web page from an Internet web server.

116. (NEW) The method of claim 115, wherein the information displayed to the buyer computer comprises a registration page that enables the buyer to register with the payment enabler for the purpose of selecting a payment instrument.

117. (NEW) The method of claim 116, wherein the buyer registers a payment instrument prior to the transaction via a static registration process.

118. (NEW) The method of claim 116, wherein the buyer registers a payment instrument after the transaction via a dynamic registration process.

119. (NEW) The method of claim 113, wherein the information displayed to the seller computer comprises a web page from an Internet web server.

120. (NEW) The method of claim 119, wherein the information displayed to the seller computer comprises a registration page that enables the seller to register with the payment enabler for the purpose of selecting a disbursement instrument.

121. (NEW) The method of claim 120, wherein the seller registers a disbursement instrument prior to the transaction via a static registration process.

122. (NEW) The method of claim 120, wherein the seller registers a disbursement instrument after the transaction via a dynamic registration process.

123. (NEW) The method of claim 113, wherein the transaction details information includes a transaction ID provided by the transaction facilitator.

124. (NEW) The method of claim 113, wherein the transaction details information includes price, shipping charges, handling charges, and total price.

125. (NEW) The method of claim 113, further comprising the step of communicating buyer user ID information from the transaction facilitator to the payment enabler for use as a registration record ID.

126. (NEW) The method of claim 113, wherein the payment enabler is connected for communications with one or more payment instrument processors which carry out issuance of appropriate payment instruments in response to selection by the payment enabler.

127. (NEW) The method of claim 126, wherein the payment instrument processors are selected from the group comprising: a credit card transaction processor, a flash

128. (NEW) In an online commerce system including a buyer computer operated by a buyer, a seller computer operated by a seller, and a transaction facilitator, the transaction facilitator comprising a network-accessible transaction computer that facilitates commercial transactions between buyers and sellers and displays a selected branding indicia to buyers and/or sellers in connection with a proposed transaction, a method for enabling a payment from a buyer to a seller utilizing a payment enabling system operated by a payment enabler, comprising the computer-implemented steps of:

in response to a proposed transaction between the buyer and the seller facilitated by the transaction facilitator, redirecting the seller computer to the payment enabling system;

displaying information from the payment enabling system to the seller computer for enabling the seller to select a disbursement instrument, the information including and displaying identical selected branding indicia as the selected branding indicia of the transaction facilitator;

in further response to the proposed transaction between the buyer and the seller facilitated by the transaction facilitator, redirecting the buyer computer to the payment enabling system;

displaying information from the payment enabling system to the buyer computer for enabling the buyer to select a payment instrument, the information including and displaying identical selected branding indicia as the selected branding indicia of the transaction facilitator;

communicating transaction details information from the transaction facilitator to the payment enabler;

at the payment enabler, generating an electronic invoice for the transaction utilizing the transaction details information;

displaying the electronic invoice to the buyer computer for approval;

in response to approval of the transaction from the buyer, displaying information to the buyer computer corresponding to a plurality of payment instruments for selection by the buyer for making payment to the seller;

receiving information from the buyer computer corresponding to a selected one of the plurality of payment instruments, indicative of the buyer's selection of a particular payment instrument for paying the seller;

displaying information to the seller corresponding to a plurality of disbursement instruments selectable by the seller for receiving payment;

receiving information from the seller corresponding to a selected one of the plurality of disbursement instruments, indicative of the seller's selection of a particular disbursement instrument for receiving payment; and

completing the transaction between the buyer and the seller by utilizing the selected payment instrument to obtain funds from the buyer and transfer such funds to the seller utilizing the selected disbursement instrument.

129. (NEW) The method of claim 128, wherein the information displayed to the buyer computer and/or to the seller computer further includes co-branding information comprising the branding indicia of the entity running payment enabler.

*O'D
Courtland*

130. (NEW) The method of claim 128, wherein the information displayed to the buyer computer comprises a web page from an Internet web server.

131. (NEW) The method of claim 130, wherein the information displayed to the buyer computer comprises a registration page that enables the buyer to register with the payment enabler for the purpose of selecting a payment instrument.

132. (NEW) The method of claim 131, wherein the buyer registers a payment instrument prior to the transaction via a static registration process.

133. (NEW) The method of claim 131, wherein the buyer registers a payment instrument after the transaction via a dynamic registration process.

134. (NEW) The method of claim 128, wherein the information displayed to the seller computer comprises a web page from an Internet web server.

135. (NEW) The method of claim 134, wherein the information displayed to the seller computer comprises a registration page that enables the seller to register with the payment enabler for the purpose of selecting a disbursement instrument.

136. (NEW) The method of claim 135, wherein the seller registers a disbursement instrument prior to the transaction via a static registration process.

b1
Confidential
137. (NEW) The method of claim 135, wherein the seller registers a disbursement instrument after the transaction via a dynamic registration process.

138. (NEW) The method of claim 128, wherein the transaction details information includes a transaction ID provided by the transaction facilitator.

139. (NEW) The method of claim 128, wherein the transaction details information includes price, shipping charges, handling charges, and total price.

140. (NEW) The method of claim 128, further comprising the step of communicating buyer user ID information from the transaction facilitator to the payment enabler for use as a registration record ID.

141. (NEW) The method of claim 128, wherein the payment enabler is connected for communications with one or more payment instrument processors which carry out issuance of appropriate payment instruments in response to selection by the payment enabler.

142. (NEW) The method of claim 141, wherein the payment instrument processors are selected from the group comprising: a credit card transaction processor, a flash cash processor, a electronic funds transaction processor, a virtual private payment account processor, and a paper check processor.

143. (NEW) An online commerce system for effecting payment in a online transaction between a buyer and a seller, the buyer operating a network-accessing buyer computer, the seller operating a network-accessing seller computer, comprising:

a transaction facilitator, the transaction facilitator operating a network-accessible transaction system that facilitates commercial transactions between buyers and sellers and displays selected branding indicia to a buyer computer in connection with a proposed transaction;

the transaction system operative in response to a proposed transaction between the buyer and the seller for redirecting the buyer computer to a payment enabling system;

a payment enabling system operated by a payment enabler for enabling a payment from a buyer to a seller;

the payment enabling system operative in response to redirecting of the buyer computer for displaying information to the buyer computer for enabling the buyer to select a payment instrument, the buyer displayed information including identical selected branding indicia as the selected branding indicia of the transaction facilitator;

a communication link for communicating transaction details information from the transaction system to the payment enabling system;

the payment enabling system responsive to received transaction details information for generating an electronic invoice for the transaction utilizing the transaction details information and for displaying the electronic invoice to the buyer computer for approval;

in response to receipt of approval of the transaction from the buyer computer, the payment enabling system operative for displaying information to the buyer computer corresponding to a plurality of payment instruments for selection by the buyer for making payment to the seller;

the payment enabling system operative to receive information from the buyer computer corresponding to a selected one of the plurality of payment instruments indicative of the buyer's selection of a particular payment instrument for paying the seller; and

the payment enabling system operative for completing the transaction between the buyer and the seller by utilizing the selected payment instrument to obtain funds from the buyer and transfer such funds to the seller.

144. (NEW) The system of claim 143, wherein the information displayed to the buyer computer further includes co-branding information comprising the branding indicia of an entity running the payment enabling system.

By Cmtid

145. (NEW) The system of claim 143, wherein the information displayed to the buyer computer comprises a web page from an Internet web server.

146. (NEW) The system of claim 145, wherein the information displayed to the buyer computer comprises a registration page that enables the buyer to register with the payment enabling system for the purpose of selecting a payment instrument.

147. (NEW) The system of claim 146, wherein the buyer registers a payment instrument prior to the transaction via a static registration process.

148. (NEW) The system of claim 146, wherein the buyer registers a payment instrument after the transaction via a dynamic registration process.

149. (NEW) The system of claim 143, wherein the transaction details information includes a transaction ID provided by the transaction facilitator.

150. (NEW) The system of claim 143, wherein the transaction details information includes price, shipping charges, handling charges, and total price.

151. (NEW) The system of claim 143, further comprising the step of communicating buyer user ID information from the transaction facilitator to the payment enabler for use as a registration record ID.

152. (NEW) The system of claim 143, further comprising a communication link for connecting the payment enabling system with one or more payment instrument processors which carry out issuance of appropriate payment instruments in response to selection by the payment enabling system.

*b2
cont'd*

153. (NEW) The system of claim 152, wherein the payment instrument processors are selected from the group comprising: a credit card transaction processor, a flash cash processor, a electronic funds transaction processor, a virtual private payment account processor, and a paper check processor.

154. (NEW) An online commerce system for effecting payment in a online transaction between a buyer and a seller, the buyer operating a network-accessing buyer computer, the seller operating a network-accessing seller computer, comprising:

a transaction facilitator, the transaction facilitator operating a network-accessible transaction system that facilitates commercial transactions between buyers and sellers and displays selected branding indicia to a seller computer in connection with a proposed transaction;

b7c
the transaction system operative in response to a proposed transaction between the buyer and the seller for redirecting the seller computer to a payment enabling system;

a payment enabling system operated by a payment enabler for enabling a payment from a buyer to a seller;

the payment enabling system operative in response to redirecting of the seller computer for displaying information to the seller computer for enabling the seller to select a disbursement instrument, the seller displayed information including identical selected branding indicia as the selected branding indicia of the transaction facilitator;

the payment enabling system further operative for displaying information to the seller computer corresponding to a plurality of disbursement instruments selectable by the seller for receiving payment;

the payment enabling system operative to receive information from the seller computer corresponding to a selected one of the plurality of disbursement instruments indicative of the seller's selection of a particular disbursement instrument for receiving payment; and

the payment enabling system operative for completing the transaction between the buyer and the seller by obtaining funds from the buyer and transferring such funds to the seller utilizing the selected disbursement instrument.

155. (NEW) The system of claim 154, wherein the information displayed to the seller computer further includes co-branding information comprising the branding indicia of an entity running the payment enabling system.

156. (NEW) The system of claim 154, wherein the information displayed to the seller computer comprises a web page from an Internet web server.

157. (NEW) The system of claim 156, wherein the information displayed to the seller computer comprises a registration page that enables the seller to register with the payment enabling system for the purpose of selecting a disbursement instrument.

*O2
entit'd*
158. (NEW) The system of claim 157, wherein the seller registers a disbursement instrument prior to the transaction via a static registration process.

159. (NEW) The system of claim 157, wherein the seller registers a disbursement instrument after the transaction via a dynamic registration process.

160. (NEW) The system of claim 154, further comprising a communication link for connecting the payment enabling system with one or more payment instrument processors which carry out issuance of appropriate payment instruments in response to selection by the payment enabling system.

161. (NEW) The system of claim 160, wherein the payment instrument processors are selected from the group comprising: a credit card transaction processor, a flash cash processor, a electronic funds transaction processor, a virtual private payment account processor, and a paper check processor.

162. (NEW) An online commerce system for effecting payment in a online transaction between a buyer and a seller, the buyer operating a network-accessing buyer computer, the seller operating a network-accessing seller computer, comprising:

a transaction facilitator, the transaction facilitator operating a network-accessible transaction system that facilitates commercial transactions between buyers and sellers and displays selected branding indicia to a buyer computer and/or a seller computer in connection with a proposed transaction;

OJ Cont'd
the transaction system operative in response to a proposed transaction between the buyer and the seller for redirecting the seller computer to a payment enabling system;

the transaction system further operative in response to the proposed transaction for redirecting the buyer computer to the payment enabling system;

a payment enabling system operated by a payment enabler for enabling a payment from a buyer to a seller;

the payment enabling system operative in response to redirection of the seller computer for displaying information to the seller computer for enabling the seller to select a disbursement instrument, the seller displayed information including identical selected branding indicia as the selected branding indicia of the transaction facilitator;

the payment enabling system operative in response to redirection of the buyer computer for displaying information to the buyer computer for enabling the buyer to select a payment instrument, the buyer displayed information including identical selected branding indicia as the selected branding indicia of the transaction facilitator;

a communication link for communicating transaction details information from the transaction system to the payment enabling system;

the payment enabling system responsive to received transaction details information for generating an electronic invoice for the transaction utilizing the transaction details information and for displaying the electronic invoice to the buyer computer for approval;

in response to receipt of approval of the transaction from the buyer computer, the payment enabling system operative for displaying information to the buyer computer corresponding to a plurality of payment instruments for selection by the buyer for making payment to the seller;

the payment enabling system operative to receive information from the buyer computer corresponding to a selected one of the plurality of payment instruments indicative of the buyer's selection of a particular payment instrument for paying the seller;

the payment enabling system further operative for displaying information to the seller computer corresponding to a plurality of disbursement instruments selectable by the seller for receiving payment;

the payment enabling system operative to receive information from the seller computer corresponding to a selected one of the plurality of disbursement instruments indicative of the seller's selection of a particular disbursement instrument for receiving payment; and

the payment enabling system operative for completing the transaction between the buyer and the seller by utilizing the selected payment instrument to obtain funds from the buyer and transfer such funds to the seller utilizing the selected disbursement instrument.

163. (NEW) The system of claim 162, wherein the information displayed to the buyer computer and/or to the seller computer further includes co-branding information comprising the branding indicia of an entity running the payment enabling.

164. (NEW) The system of claim 162, wherein the information displayed to the buyer computer comprises a web page from an Internet web server.

165. (NEW) The system of claim 164, wherein the information displayed to the buyer computer comprises a registration page that enables the buyer to register with the payment enabling system for the purpose of selecting a payment instrument.

166. (NEW) The system of claim 165, wherein the buyer registers a payment instrument prior to the transaction via a static registration process.

167. (NEW) The system of claim 165, wherein the buyer registers a payment instrument after the transaction via a dynamic registration process.

168. (NEW) The system of claim 162, wherein the information displayed to the seller computer comprises a web page from an Internet web server.

169. (NEW) The system of claim 168, wherein the information displayed to the seller computer comprises a registration page that enables the seller to register with the payment enabling system for the purpose of selecting a disbursement instrument.

170. (NEW) The system of claim 169, wherein the seller registers a disbursement instrument prior to the transaction via a static registration process.

171. (NEW) The system of claim 169, wherein the seller registers a disbursement instrument after the transaction via a dynamic registration process.

172. (NEW) The system of claim 162, wherein the transaction details information includes a transaction ID provided by the transaction facilitator.

173. (NEW) The system of claim 162, wherein the transaction details information includes price, shipping charges, handling charges, and total price.

174. (NEW) The system of claim 162, further comprising the step of communicating buyer user ID information from the transaction facilitator to the payment enabler for use as a registration record ID.

b2
cwyd
175. (NEW) The system of claim 162, further comprising a communication link for connecting the payment enabling system with one or more payment instrument processors which carry out issuance of appropriate payment instruments in response to selection by the payment enabling system.

176. (NEW) The system of claim 175, wherein the payment instrument processors are selected from the group comprising: a credit card transaction processor, a flash cash processor, a electronic funds transaction processor, a virtual private payment account processor, and a paper check processor.

4) Record of Interview

The applicants would like to thank Examiner Pwu for his helpful comments and suggestions during the telephone interview of July 2, 2003 with Mr. Brian Anderson, and during the personal interview with the undersigned on August 26, 2003. During the telephone interview several points of novelty over the cited art was discussed (the last of which is pursued in this amendment, based on the direction of later personal interview). Aspects of the inventions discussed during that telephone interview included:

- 1) a seller selecting a disbursement instrument desired for the particular transaction;
- 2) a payment enabler separately approving the seller for each payment instrument;
- 3) placing the seller in a tiered risk group and displaying that information to the buyer;
- 4) placing the seller in a tiered risk group and correspondingly limit the payment amount; and
- 5) branding the payment enabler similar to the seller.

The Examiner indicated that he would be inclined to allow the claims if they were amended to include several of the aforementioned limitations.

On August 26, 2003, the undersigned conducted a personal interview with Examiner Pwu. The Applicant and the undersigned appreciate the courtesy extended by the Examiner during that interview.

Pursuant to 37 C.F.R. § 1.133(b), the following description is submitted as a complete written statement of the reasons presented at the interview as warranting favorable action. The following statement is intended to comply with the requirements of MPEP § 713.04 and expressly sets forth: (A) a brief description of the nature any exhibit shown or any demonstration conducted; (B) identification of the claims discussed; (C) identification of specific prior art discussed; (D) identification of the principal proposed amendments of a substantive nature discussed; (E) the general thrust of the principal arguments; and (F) a general indication of any other pertinent matters; and (G) the general results or outcome of the interview, if appropriate.

(A) No exhibits were shown or discussed.

(B) The independent claims were discussed in general, but not specifically. The undersigned indicated that a substitute claim set would be presented, directed to the notion of displaying advertising indicia (see discussion below).

(C) The *Kramer* patent was discussed generally, but not specifically.
(D) No proposed amendments were presented or discussed.
(E) The general thrust of the discussion was as set forth below in the next paragraphs.

(F) No other matters were discussed.

(G) No agreement was reached during the interview regarding the claims.

The general thrust of the discussion was the undersigned's brief explanation of certain aspects of the invention, in particular aspects relating to (a) an "online cash register" for a seller in an online commerce system, and (b) the display of identical branding indicia by the web page of a payment enabling system as the branding indicia of a transaction facilitator computer system, in connection with facilitating the payment from a buyer to a seller in connection with an online transaction. The undersigned generally described this as well as other aspects of the subject matter for which a patent was sought and how the cited art did not disclose, teach, or suggest such aspects. The undersigned agreed to submit a substitute claim set that would present the subject matter in better form for allowance, or for appeal if necessary.

The new claim set submitted herewith is intended to be responsive to the examiner's indication during the interview that—although no agreement was reached—this subject matter did not seem to be anticipated or obvious in view of the cited art and should be allowable.

In the event that the foregoing record is not considered complete and accurate, the Examiner is respectfully requested to bring any incompleteness or inaccuracy to the attention of the undersigned.
